

Supplier Quality Suite

Digitize supplier data, automate evaluations, and stay
audit-ready - without the paper clutter.

In today's food and agriculture industry, even the most experienced producers face a tough challenge: How do you get more from your raw materials and finished products - while still improving quality? The answer lies in data you can trust. Where nature is unpredictable, data never fails.

FOSS IQX Supplier Quality Suite

Free your team from manual tasks like searching for documents, tracking expiry dates, and preparing supplier data. Instead, let them focus on driving business value.

Gain full visibility into compliance and share information effortlessly. Stay ahead of regulations, reduce risks, and avoid costly recalls.

Handle complaints with ease. Quick registration and strong case follow-up prevent repeated issues and help recover costs.

FOSS IQX Supplier Quality gives you efficiency, peace-of-mind, and insights.

Now is the time to take control.

Legacy Meets the Power of Digitalization

For decades, FOSS has set the standard in food analytics with the industry's leading portfolio of quality measurement solutions - revolutionizing how producers ensure safety and integrity.

Now, that legacy teams up with the latest benefits of digitalization. IQX Supplier Quality expands your capabilities with:

- Digitized supplier quality data for instant access and control
- Smart alerts and notifications to keep you ahead of compliance
- Automated supplier communication for seamless collaboration
- API integration to connect quality data across your organization
- Flexible options like SSO and private cloud to fit every need

The result?

A complete solution that combines trusted measurement with modern digital efficiency - giving you clarity, control, and confidence in every step of your supply chain.

What Supplier Quality does for you

FOSS IQX™ Supplier Quality helps you keep suppliers compliant, run audits with ease, and continuously monitor quality performance. Get complete visibility into supplier data, speed up issue resolution, and uphold consistent, high standards across your entire supply chain.

Visibility in supplier management

- Store, update, and manage critical supplier details centrally.
- Automated alerts notify you of expiring certifications or missing documentation, so you never have gaps in compliance.
- Supplier audit module enables you to schedule, execute, and log audits digitally.
- Registration in goods receiving module allows for tracking and traceability of all crucial delivery information.

Simplified supplier collaboration

- Automated communication with your suppliers through supplier portals releases you from back-and-forth emailing.
- Ease the task of onboarding of new suppliers through central collection of documents and supplier portal communication.
- Log quality issues, monitor response times, and enforce corrective actions through the complaint module.

Quality measurement integration

- Ensure your supplier quality measurement history is always correct and up-to-date by integration with your FOSS instruments for quality analysis.
- Improve your negotiation position and be able to act fast in case of disruptions with access via the up-to-date supplier evaluation dashboards.
- Avoid silos in supplier quality information by gathering both quality measurements and documentation management in one solution.

FOSS IQX™

Supplier Quality Modules

Modules	Description
Supplier Quality Settings	• Configure access roles and permissions for SQ modules (incl. multi-site) • Manage account notifications • Connect FOSS instruments to specific sites for goods received • Manage material and service list • Define specifications for each material for goods recieved
Supplier Information	• Onboard and manage suppliers and sites • Keep track of supplier documentation for compliance • Request supplier information using questionnaire for onboarding or updating • Track all information updates using the timeline • Manage supplier contacts • Connect materials-to-supplier sites • Track topic-relevant communication in communication log
